

TOMOE TRIPLE-OFFSET NUMBERING SYSTEM ***TT2 STOCKED***

EXAMPLE:

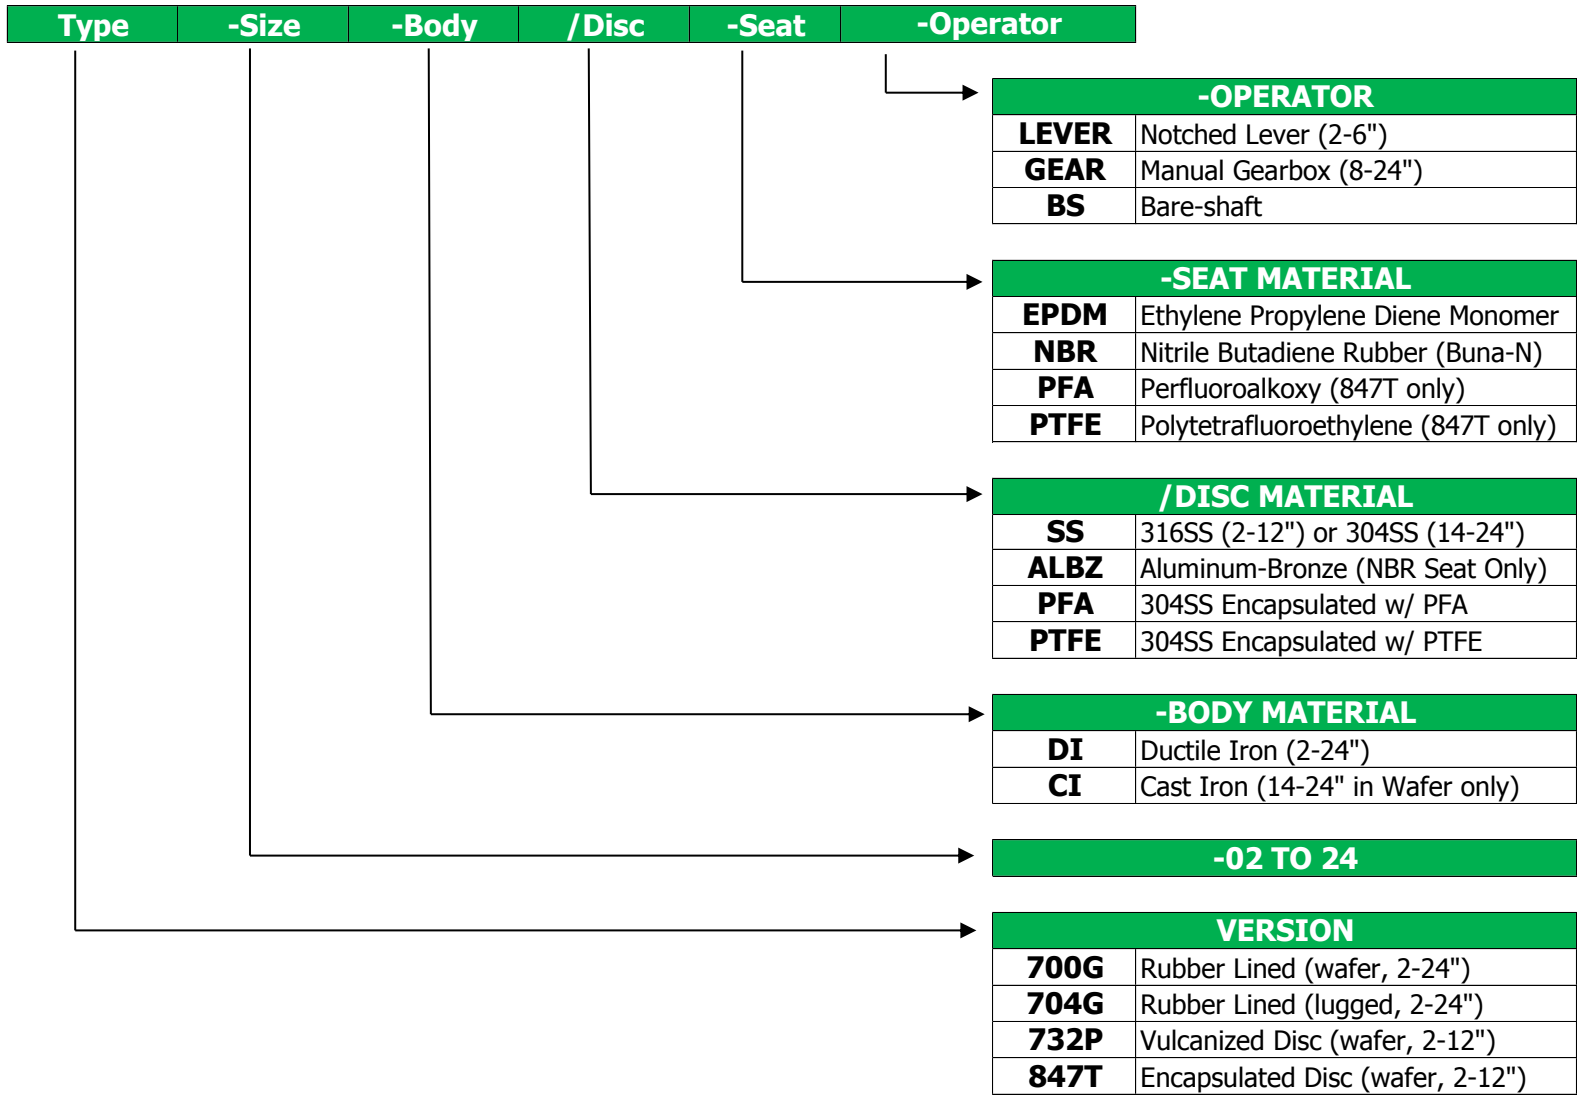

6" ANSI 150# Triple Offset, Double Flanged Long Pattern Body to replace a Gate Valve in Carbon Steel with Hard Faced Trim, Bearing Protectors Required, Gear Operated with Live Load Packing & Oxygen Clean Build.

T2AGR-06-CS/CS-DN/BP-GEAR-LL-O2

When requesting a SS disc on a CS body, please note the following:

Tomoe stocks CS discs with CS bodies on most sizes because the trim (disc seal & body seat) is actually SS & coated with TiNi. Tomoe sees no reason to use a SS disc when you consider the disc & body are both wetted parts so using a SS disc would only result in higher prices. It is the disc seal & body seat that make the seal on our design so this valve is technically a carbon steel bodied valve with a stainless trim. However, we can & will offer a SS disc if it is required.
